

BETTY WOO, AIA
ARCHITECTS

To Whom It May Concern,

For more than four years now, we have depended on Spectral Engineering for electrical engineering design. They have performed for us, projects from as large as a new 30,000 square foot office building (LEED Certified) to a small 1,500 square foot ice cream parlor tenant improvement and several new and remodel projects of various sizes in between. In our experience, Meg Hobbs provides conscientious attention to detail for every project.

We have come to depend on Meg's reliability, responsiveness and ability to prioritize issues. She also has excellent communication skills which help us keep the design team on track. We greatly appreciate Meg's problem solving skills and willingness to tackle challenges.

As an architect with 30 years of experience in commercial and institutional projects, I have worked with many capable consultants. I recommend Spectral Engineering without reservation for any project. Please feel free to contact me with any questions.

Sincerely,

A handwritten signature in blue ink that reads "Betty Woo".

Betty Woo, AIA
